

## *Announcing the biggest update to the FMR family since the introduction of the FMR!*

### *New Product:*

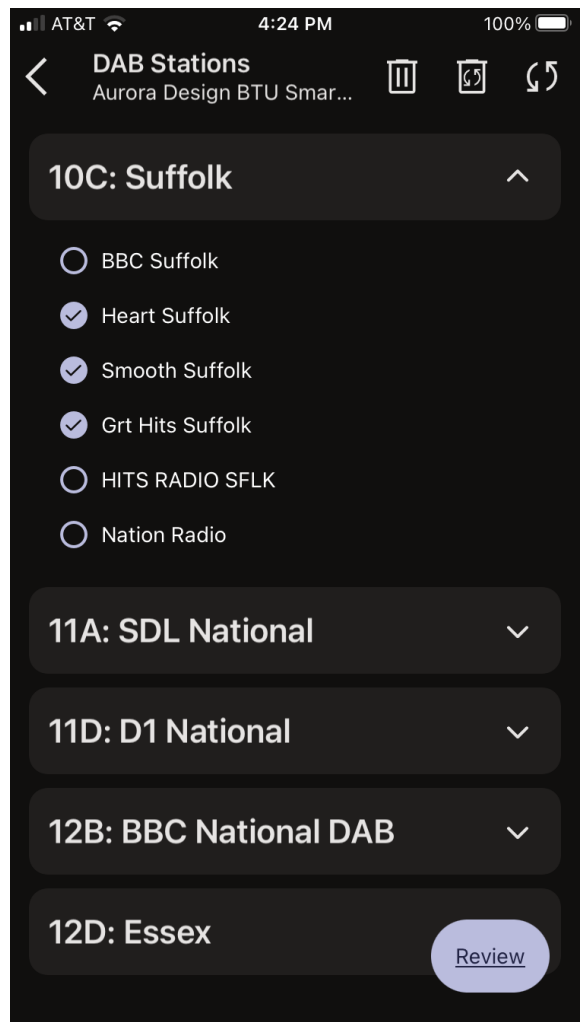

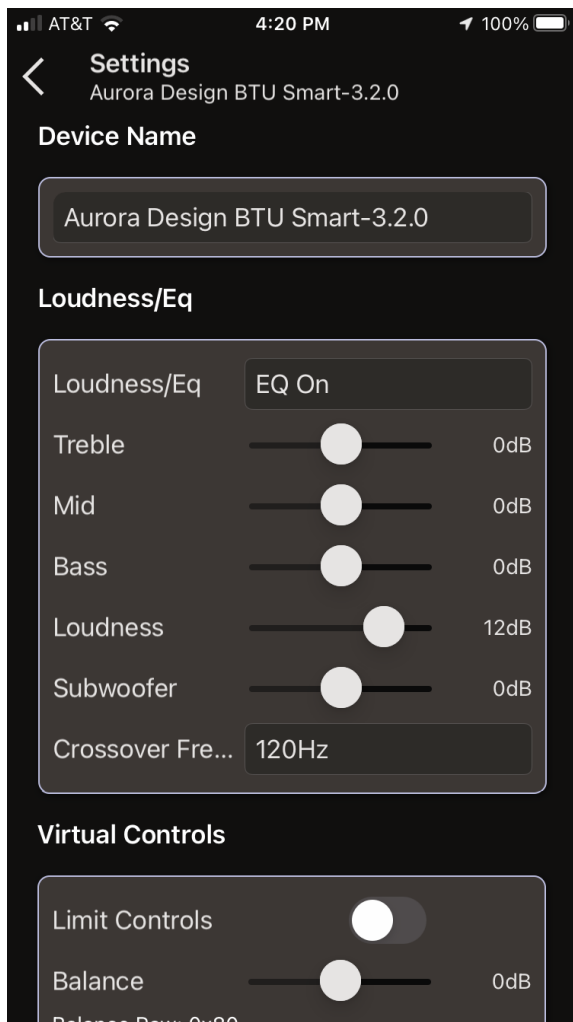

### **BTU Smart-3.2 / BTU-3.2**

The BTU Smart-3.2 is the final culmination of over a year of research and design. This update brings the FMR Configurator capabilities, the ability to fully control the FMR/BTU, to the mobile space.

When a radio is equipped with an FMR-3.0 and a new BTU Smart-3.2, using the free FMR Connect™ App for iOS™ (Android™ support coming soon) the user can control all radio functions from the Equalizer to the balance/fader controls, to the DAB radio station selections. All done in realtime, adjustments are reflected immediately on the radio for instant feedback.

Now radios with no tone control, thumbwheels, difficult knobs, etc. can be fully controlled without the twist actions. The only action that is required is to open Bluetooth Pairing. For Concourse Conversions, the *Voice Assist HD* can now be controlled, from full announcements, to limited Bluetooth announcements, to only ones that are initiated by the user. The user can also now lock the virtual radio controls so that these functions are only available through the App. This keeps other people from changing the settings or accidentally changing them.

In addition, the BTU Smart-3.2 offers all the latest Bluetooth 5.0 support like wideband speech for higher quality voice.

Much more functionality will be coming to the FMR Connect™ App in the coming months!
